

The New Soma Safe Enclosure

Our New Enclosed Bed is a 100% padded, fully electric hospital bed. Always on casters means that patient transport is a snap and four independent zippers give you quick access to the patient on every side of the canopy.

The canopy itself is custom fitted to the mattress, reducing the risk of patient entrapment and black netting offers improved visibility and less chance for staining.

The Soma Bed Enclosure fits over most hospital beds but unlike other models, remains on casters making assembly much simpler. It's canopy design is identical to the Enclosed Bed aside from the absence of a hospital bed which you provide. The frame folds down easily to just 15"x15"x72" for the simplest storage ever! Re-assembly takes only minutes!

- Netting features small holes to eliminate patient finger entrapment
- Black Netting doesn't stain or yellow over time
- Canopy can be installed in minutes by one person via simple zip-on function
- Assembly takes only minutes on any model
- Vertical side-rail is in constant contact with mattress, reducing entrapment zones
- Netted Bottom Panel Ensures Air Flow Beneath the Patient, Reducing Entrapment Risks
- Eliminate Patient Falls

- Reduce Sitter Costs
- Reduce Risk of Patient and Staff Injury
- Approved for sale by the FDA
